ATTY DKT Q64360

AMENDMENT UNDER 37 C.F.R. § 1.111 U.S. APPLN. NO. 09/856,374

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1 1

1.-12. (canceled)

- disorders comprising introducing a polynucleotide encoding n hepatocyte growth factor (HGF) gene and/or a polynucleotide encoding vascular endothelial growth factor (VEGF) gene in the form of hemagglutinating virus of Japan (HVJ)-liposomes) by direct injection into the subarachnoid space in humans thereby treating or preventing said cerebrovascular disorders.
- 14. (currently amended): A therapeutic or preventive method for treating or preventing reduced blood flow comprising introducing a polynucleotide encoding n-HGF gene and/or a polynucleotide encoding VEGF gene-in the form of HVJ-liposomes by direct injection into the subarachnoid space in humans thereby treating or preventing said reduced blood flow.
- 15. (currently amended): A method of promoting cerebral angiogenesis comprising introducing a polynucleotide encoding n-HGF gene and/or a polynucleotide encoding VEGF

AMENDMENT UNDER 37 C.F.R. § 1.111 U.S. APPLN. NO. 09/856,374

ATTY DKT Q64360

gene in the form of HVJ-liposomes by direct injection into the subarachnoid space in humans thereby promoting said cerebral angiogenesis.

- 16. (currently amended): A method of suppressing neuronal death in the brain comprising introducing a polynucleotide encoding n-HGF gene-in the form of HVJ-liposomes by direct injection into the subarachnoid space in humans thereby suppressing said neuronal death in the brain.
- 17. (currently amended): A method of suppressing apoptosis of nerve cells in the brain comprising introducing by direct injection a polynucleotide encoding n-HGF gene-in the form of HVJ-liposomes into the subarachnoid space in humans thereby suppressing said apoptosis of nerve cells.

18.-25. (canceled).
